

Sprint #1 Report  
Classroom Hero  
October 28, 2014

**Actions to stop doing:**

Nothing. We've been having meetings 3 times a week to discuss our progress in the project. The meetings normally go over 15 minutes to finish the paperwork, but we find that the meetings are still effective and the time is used well.

**Actions to start doing:**

Start doing the tasks that aren't involved with learning rails. So far we've all been doing the same rails tutorial which involved setting up a cloud rails development environment for the team to work on together and putting it on github.

So, we need to start prioritizing what we learn from the tutorials, and start writing the code that will be used for the website.

**Actions to continue doing:**

The team wants to keep having our scrum meetings three times a week.

The team wants to keep learning from the rails tutorial.

The team wants to keep using/updating the scrum board.

**Work completed/not completed:**

User stories completed: As a developer, I need a ruby on rails environment linked to github. As a developer, I need to learn ruby on rails. As a developer, I need to host a rails website locally with basic HTML/CSS elements and request mapping.

User stories not completed: As a developer, I need to lay out the skeleton of the final site.

**Work completion rate:**

Total number of user stories completed: 3

Total number of estimated ideal work hours completed: 50 hours

Total number of days: 14 days

We completed about  $\frac{1}{4}$  of a user story per day.

We worked about 1 hour a day.
